Reduce the cost of your Planning & Scheduling or Mobile Maintenance solution by 50%!!

SAP PM customers who have previously invested in solutions for Planning and Scheduling or Mobility can now smoothly transition to the Sigga solution through a cost-neutral adoption process and reduce the costs of the solution by 50% compared to your existing solution.

Many SAP customers struggle with vendors due to issues like:

⚠ End of life forced migration

⚠ Vendors not staying focused on the SAP ecosystem

⚠ Generally being "taken for granted" by the current vendor

Our Safe Passage program helps to solve these market factors.

We're currently helping to transition many customers away from their current vendors for these reasons.

With Sigga's Safe Passage Program you can:

💡 **Deploy the solution without paying license fees while your existing solution is still in production.**

This means as your contract expiration date approaches, you can begin utilizing, testing, and training on the Sigga solution immediately, but you won't pay anything until it goes into production – avoiding "double dipping" on license fees.

💡 **Reduced license costs by 50% over your current solution**

If you are currently paying $500,000 per year in license fees, the pricing for the Sigga solution will be $250,000. No strings attached.

No cost in professional services for adopting the Sigga solution

Includes installation, configuration, and training (train the trainer approach). Further services will be at a fixed, reduced rate of $100 per hour.

Seamlessly transition your Planning & Scheduling or Mobile Maintenance solutions with zero disruptions, zero transition costs. Use the cash saved to spend on other critical areas.
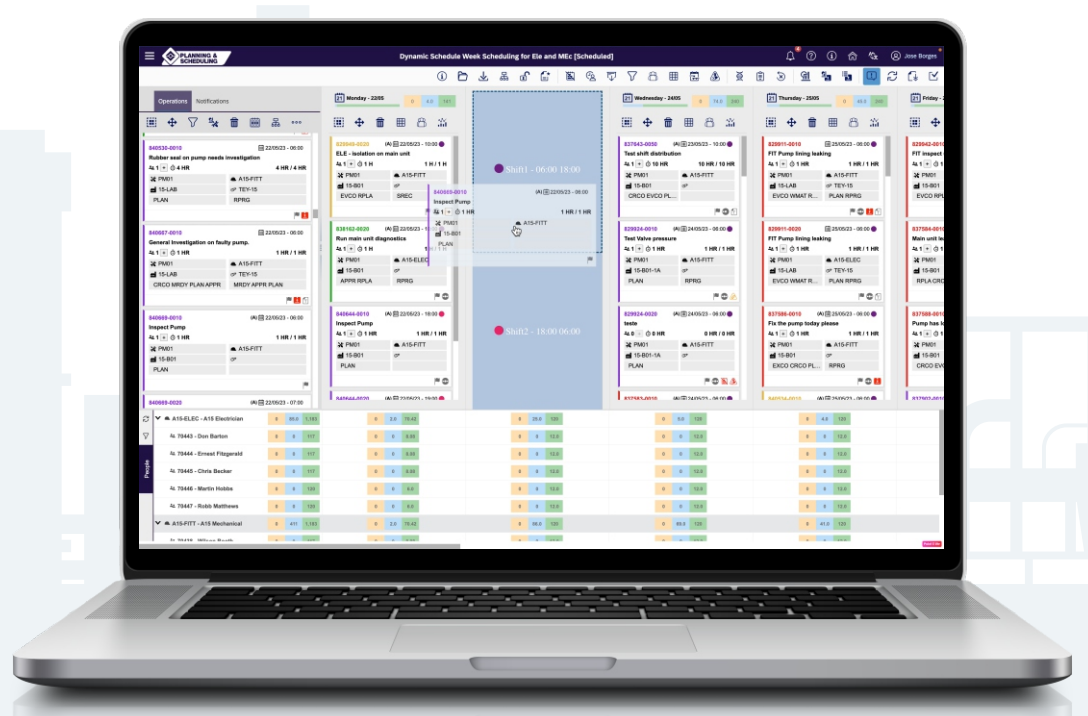

Why Sigga? Why now?

Sigga has been dedicated to serving only the SAP PM community for over 20 years. We have served tens of thousands of users across the globe with industry-leading Planning and Scheduling and Empower EAM solutions.

Sigga Planning and Scheduling™ is an advanced Planning and Scheduling solution that includes capabilities such as budget, skills matrix, contractor management, and mass change capabilities, including standard "drag and drop" scheduling.

Unlike other solutions on the market, these capabilities are "all inclusive", meaning that all current and future modules of Planning and Scheduling are included in the license.
This means that capabilities like mass change, order to task list, order to BOM, and print manager, among others, are all available without separate license fees.

SAP® Certified
Integration with SAP S/4HANA®

Sigga EAM Empower™ is the only no-code mobile worker execution solution. Complete work orders via mobile functionality such as full offline support, creating SAP notifications, creating and assigning work orders, multiuser time confirmations, contractor support, media availability (documents, graphics, and related), and the ability to capture pictures, videos, and audio to attach to work orders and sync with SAP.

The **Sigga EAM Empower™** solution provides a much faster time to value and maintains its value over time by allowing you to flexibly adapt to business changes.
